

Part I

**The role of the Multifunctional Building
for Free Time and Leisure**
– sustainable development of Tallinn

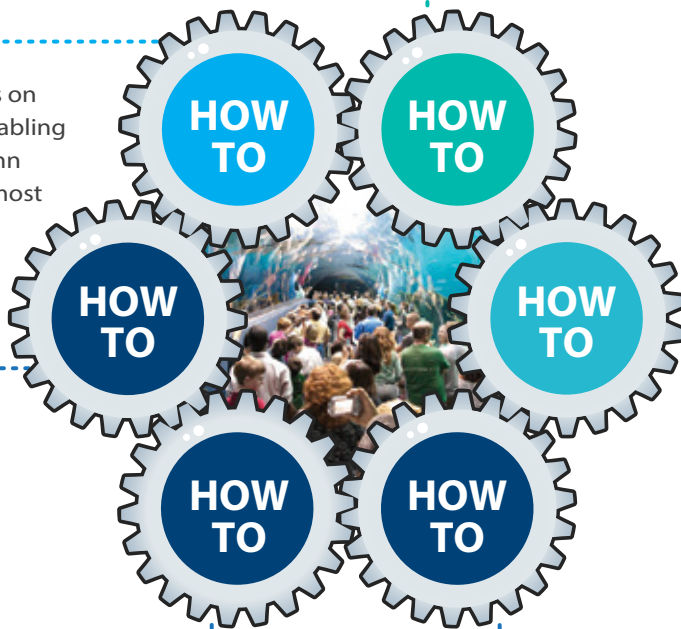

CHALLENGES facing Tallinn in the coming years

Build a strong brand of Tallinn,
as a city with many tourist attractions
available 365 days a year?

Stimulate the development
of a large portfolio of tourist
attractions?

Increase the returns on
marketing while enabling
tourists to find Tallinn
on the map of the most
attractive cities
in Europe?

Reduce
unemployment
and boost
the number
of inhabitants?

Increase
income
for the city
of Tallinn?

Create
permanent,
year-round
jobs?

NEW ERA, NEW NEEDS, new expectations

The local public administration should make as much effort as possible to listen to the present needs and expectations directed towards the City of Tallinn. Today, modern cities and agglomerations must be attractive not only for tourists, but also the local community. Attractions should be balanced between tourists and residents to ensure year-round use, while the tourist season should be long enough to ensure permanent employment for those working in the tourist sector.

A detailed analysis of needs and expectations will allow the City of Tallinn to make the correct decision in respect to sustainable development, while also meeting the needs of all social groups within the city.

NEEDS / REQUIREMENTS		
LOCAL ADMINISTRATION	RESIDENTS	TOURISTS
- Increased income for the city budget - Stimulate the development of the local economy - Increase the number of jobs - Assuring the sustainability of the city - Developing the wider Harju County - Funds for future investments - Lengthening the tourist season	- Improved quality of life - Access to new technology and infrastructure - Access to new attractions that allow active recreation	- Access to new attractions, available 365 days a year, irrespective of weather conditions - Access to a good selection of hotels - Access to high quality gastronomic and transport services
HOW TO MEET THE NEEDS AND EXPECTATIONS ? OF ALL GROUPS?		

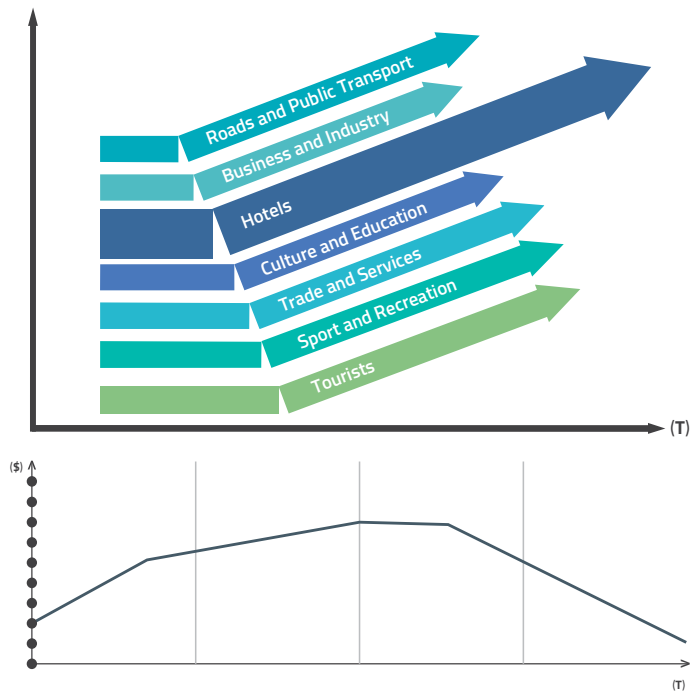

HOW TO AVOID ERRORS during the creation of development plans?

The most common mistake made during the development of agglomerations is to concentrate efforts on one dominant area after identifying positive trends in that area.

An excellent example is the large investments made in the hotel industry on the Spanish coast. After several lucrative years, the collapse in hotel bookings led to a large crash in the accommodation sector. Only after this crash did the errors made in planning and development in other agglomerations become apparent.

The inability to develop a permanent, year-round population as a source of labour as well as a lack of facilities provided for such populations combined with an investment policy based around hotels and apartments have not worked in the long term for the Spanish coast.

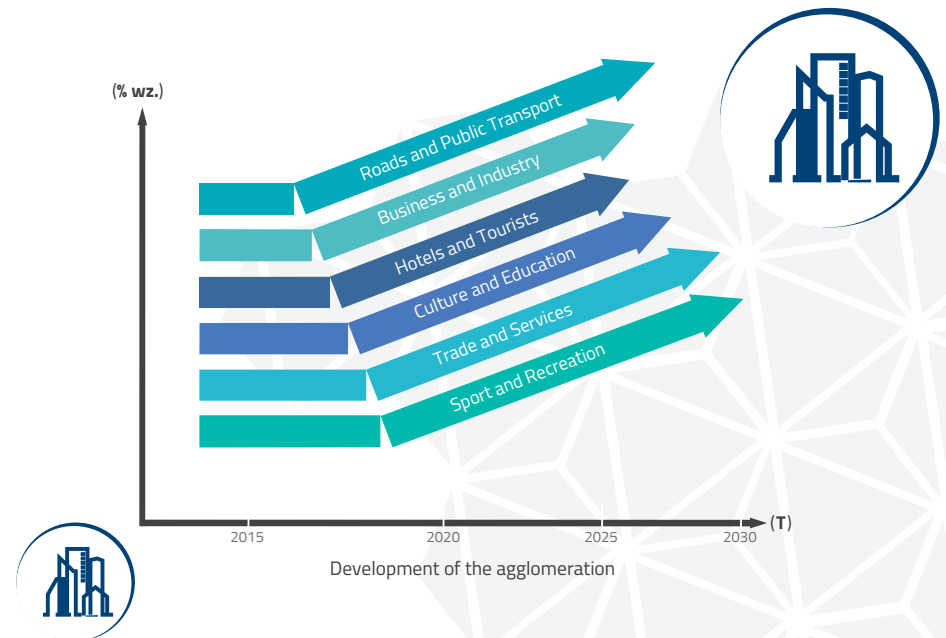

Analysis of the hotel sector on the Spanish coast

SUSTAINABLE DEVELOPMENT Tallinn

Every local government faces the important goal of ensuring the dynamic development of the city or larger agglomeration. They should create the main direction of development alongside creating strategic goals and projects. The implementation of these projects should ensure the sustainable development in the future. These plans should increase the socio-economic development of the local government area, improve the quality of life of inhabitants, provide them with permanent jobs and ensure that they have several alternative options for spending their free time.

The sustainable development of Tallinn should be preceded by a careful analysis of the current situation in the city along with the existing needs. Only then can resources be allocated and actions taken to stimulate the growth of the city in different areas.

Development of the agglomeration

FEATURES OF THE ATTRACTION:

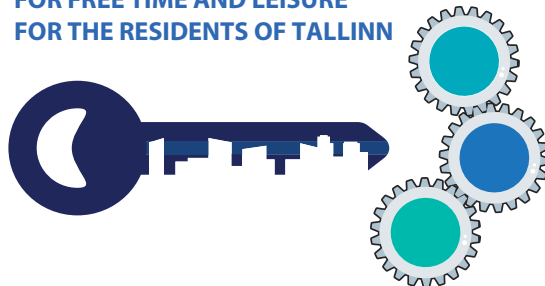

The Modern Multifunctional Building for Free Time and Leisure is an investment that:

- becomes the center of the city
- **lengthens the tourist season to 365 days a year**
- **operates as a magnet, which attracts a new, broad stream of tourism**
- **has a real impact on the development on other branches of the local economy (transport, hotels, gastronomy, etc)**
- becomes a real icon of the city, increasing the value of the city brand and region/country
- **creates a new culture of free time for inhabitants of Tallinn**
- meets the needs of all the target groups
- provides long term profits for the city, country and investors and contributes to city and country budgets
- complements the current tourist and recreational portfolio of attractions in the city, and encourages the future diversification of the portfolio
- introduces innovative tools for operating the attraction as well as assisting with managing the wider tourist stream in Tallinn and Estonia.

THIS IS OUR KEY TO

THE TOURIST ENGINE

AND THE MULTIFUNCTIONAL BUILDING FOR FREE TIME AND LEISURE FOR THE RESIDENTS OF TALLINN

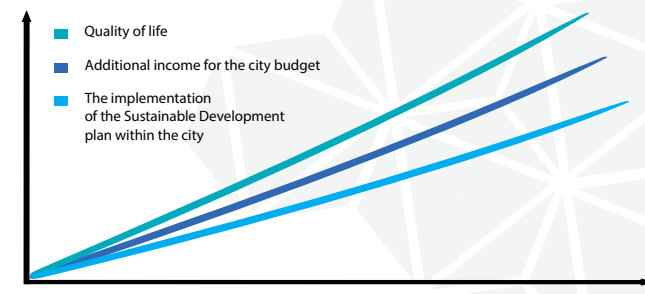

KEY COMPETENCES

On the road to success

For many cities, gaining knowledge and expertise in the fields of biology, construction and operation of specialized facilities such as large aquariums can be very difficult and time consuming.

This is why cooperation with an experienced partner can guarantee the creation of an attraction that will be:

- The heart of the city
- Will meet the needs of many target groups
- Creates a new culture of free time
- Innovative and interactive
- A new icon of Tallinn and Estonia
- Extends the tourist season to 365 days a year
- Increases tourist traffic during traditionally quiet periods
- Acts as a powerful magnet, attracting between 2-3 million tourists a year
- It has a real impact on other branches of the local economy, particularly in the fields of transport, accommodation and gastronomic services
- Generates long term profits for Tallinn, Estonia and investors
- Provides additional promotion for Tallinn and Estonia

It is the right moment for Tallinn and Estonia to take the appropriate actions that will allow for the effective implementation of a new sustainable development programme, and will also increase the quality of life of visitors. Young people will want to live and work in a successful city, where they can benefit from permanent, year-round work while being able to develop themselves in an exciting, modern capital city. They will also be delighted to be able to spend their time in new and unique attractions in the heart of the city.

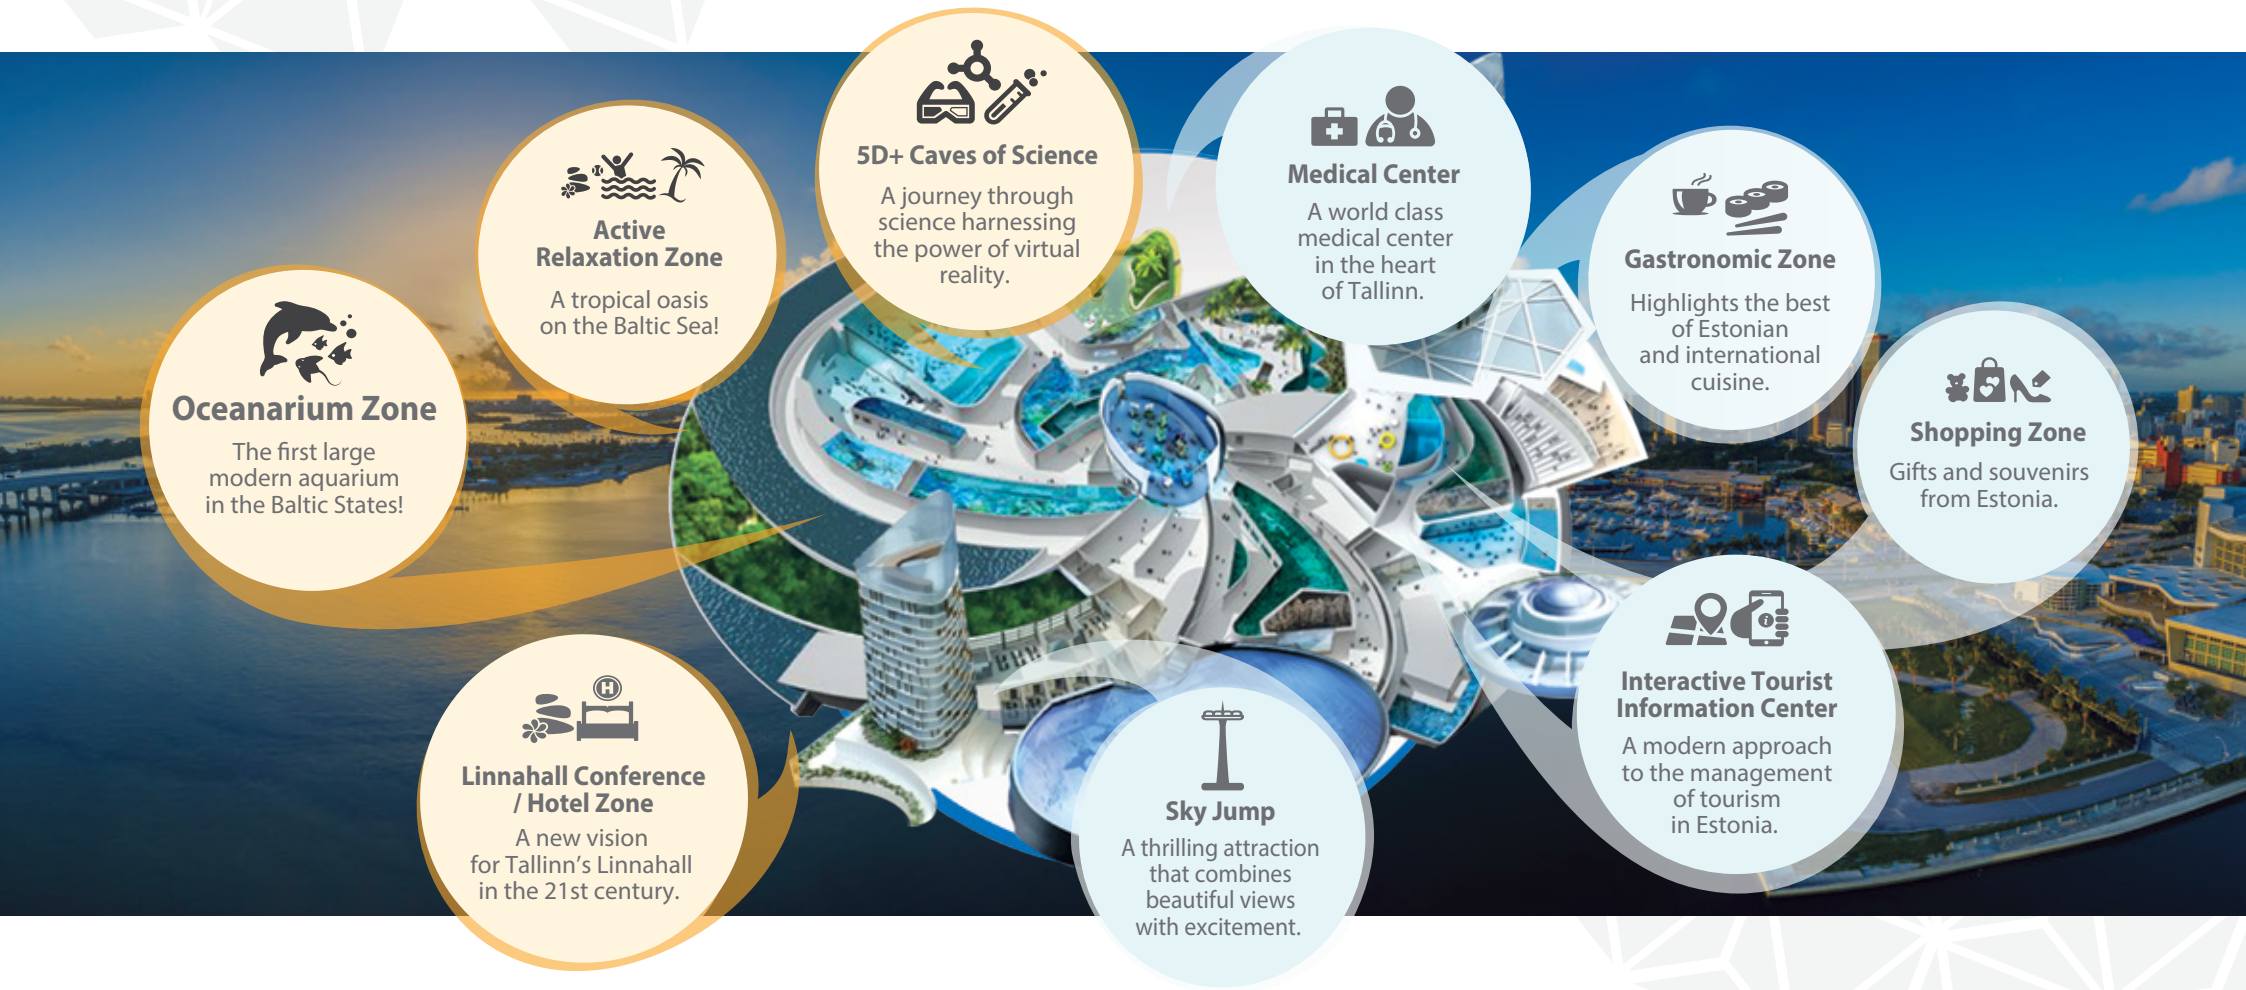

KEY TO THE TOURIST ENGINE

KEY TO THE MULTIFUNCTIONAL BUILDING FOR FREE TIME AND LEISURE FOR RESIDENTS

The Multifunctional Building for Free Time and Leisure

The Multifunctional Building for Free Time and Leisure is the optimal solution for Tallinn. It allows the city to meet the needs and expectations of residents, tourists and local administration, while simultaneously enhancing tourism and recreational possibilities in the city.

KEY TO THE TOURIST ENGINE

Key to the Multifunctional Building for Free Time and Leisure for the residents of Tallinn

The carefully curated selection of attractions within the complex prolong the tourist season in Tallinn to a full calendar year! The influence of the Multifunctional Building for Free Time and Leisure on the tourism industry produces real and tangible benefits for the local economy. The successful implementation of the attraction also ensures the sustainable development of Tallinn and the wider Harju County.

Tallinn Oceanarium

- a magnet which attracts new streams of tourism, with the potential of attracting up to 2-3 million visitors yearly
- available 365 days a year, independent of external weather conditions
- new icon of Tallinn and Estonia
- generates large amounts of income
- operates with the mission of being pro-education and pro-ecological
- builds a new culture of Free Time and Leisure

5D+ Caves of Science

- The zone provides an educational dimension to the complex
- promotes pro-ecological solutions based on renewable energy sources
 - the secrets of science are presented in an interactive form, adapted to different age groups
 - it is the perfect place for schools to visit to learn more about the natural world
 - these visits ensure a steady flow of school trips, which in turn provides an additional flow of visitors to the attraction

Tallinn Exotic Lagoon

- provides an active form of recreation for residents of Tallinn
- an alternative attraction for tourists, especially in winter
- can be used as part of a process of rehabilitation for Medical tourists
- generates additional streams of tourists and visitors

Hotel Secret Continental

- themed rooms and floors
- enriched with various possibilities, such as an art gallery, observation decks and more.
- equipped with a restaurant serving themed cuisine from various parts of the world
- also plays a role in attracting medical tourism to Tallinn

Gastronomic Zone / Shopping Zone

- available for guests from all parts of the complex
- a variety of culinary offerings and possibilities
- the cuisine in the Gastronomic Zone is adapted to the needs of tourist and residents

Medical Center

- the medical center will contribute to the development of the medical tourism sector in Tallinn and Estonia
- offers a network of highly specialized medical practices, with a focus on outpatient surgery

Interactive Tourist Information Center

- aims to effectively manage the new streams of tourists in Tallinn by implementing innovative ICT tools
- it will provide a comprehensive database of attractions, hotels, entertainment venues, restaurants, cinemas, theatres, museums, sport events, etc. in Tallinn and Estonia.
- it will provide an application that will allow visitors to not only book tickets to attractions, but also will allow them to access attractions at their chosen times. They will also have comprehensive information about different attractions, while also providing tourists with the possibility of buying public transport tickets, booking taxis or simply acting as a navigation tool within the city.

TALLINN AQUARIUM – Join the Puzzle

The Multifunctional Building for Free Time and Leisure is tailored to the needs and expectations of the City of Tallinn. The building can feature many possibilities, with each component chosen after a detailed analysis of tourist trends and future potential in the city and within Estonia.

- 1  Oceanarium
- 2  Aquariums
- 3  Active Relaxation Zone
- 4  Healthy Air Center with Salt Chambers
- 5  Medical Center

- 21  Revolving Restaurant and Viewing Tower

- 20  Trampoline Park, Laser Paintball Zone

- 19  Penguin Island

- 6  5D+ Caves of Science

- 7  Experimentarium Interactive Science Center, Planetarium

- 8  Mediateka

- 9  Congress Center

- 10  Hotel

- 11  Gastronomic Zone

- 12  Shopping Zone

- 13  Interactive Tourist Information Center

- 14  Modern Observation Wheel

- 15  Aerodynamic tunnel, Flight Simulator

- 16  Rollercoaster

- 17  Dinopark, Jungle

- 18  Cable Car

BENEFITS FLOWING TO THE CITY

from the creation of the Multifunctional Building for Free Time and Leisure

Interactive

The complex is a response to the needs of modern civilization, catering for entertainment and education simultaneously for both visitors and residents.

Educational

The multi-purpose 5D+ Caves of Science are designed to spread knowledge and promote learning for visitors of all ages. It will be a special attraction for school and student trips, for whom there will be special workshops and lectures.

Popular

The attractiveness of the complex for tourists guarantees a high number of repeat visitors. Our experience shows that new Oceanarium projects attract at least 3-4 million visitors yearly.

Financing

Worldwide, commercial buildings of this type are characterised by being self-financing. Appropriate methods of financing ensures successful construction as well as problem free management.

Ecological

The facility will be constructed using environmentally friendly building techniques. When the complex is built, it will operate using the latest technologies to protect the environment. In the same manner, the Oceanarium will contribute to nature through the protection and breeding of species threatened with extinction.

Nowa Ikona

The complex will be regarded as an iconic landmark. It will be the biggest attraction in Tallinn, and it will have a hugely positive effect on marketing Tallinn and Estonia. It will even translate into increasing the perception of Tallinn by potential investors who want to invest in the city, which in turn will create new jobs and improve tax revenues.

Jobs

The investment creates hundreds of new jobs related to the project, as well as driving further developments in tourism.

Open All Year

The attraction is accessible regardless of the weather conditions, which will drive tourism to Estonia during the winter months and provide Tallinn with at least 1.5 million extra visitors yearly.

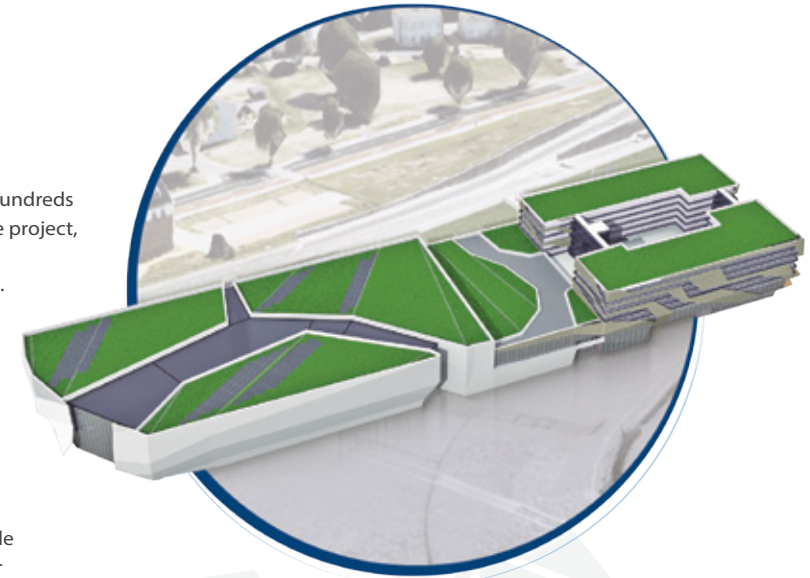

Economic

As a hub of economic growth, it will encourage further development of the Estonian tourist economy and drive further investments in tourism, hotels, transportation and gastronomy.

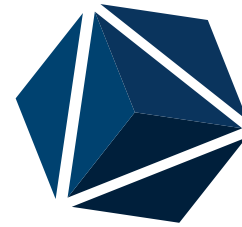

Income

Our research and experience shows that if 50 Euro is spent in an Oceanarium, an additional 350 Euro is spent on additional tourist services in the region.

A large, hexagonal-shaped aerial photograph of a historic European city, likely Tallinn, Estonia. The image shows a dense cluster of buildings with red-tiled roofs, interspersed with green trees. A prominent church spire is visible on the left side. The city is surrounded by a body of water, and the sky is blue with scattered white clouds. The image is framed by a white border.

PFI GLOBAL

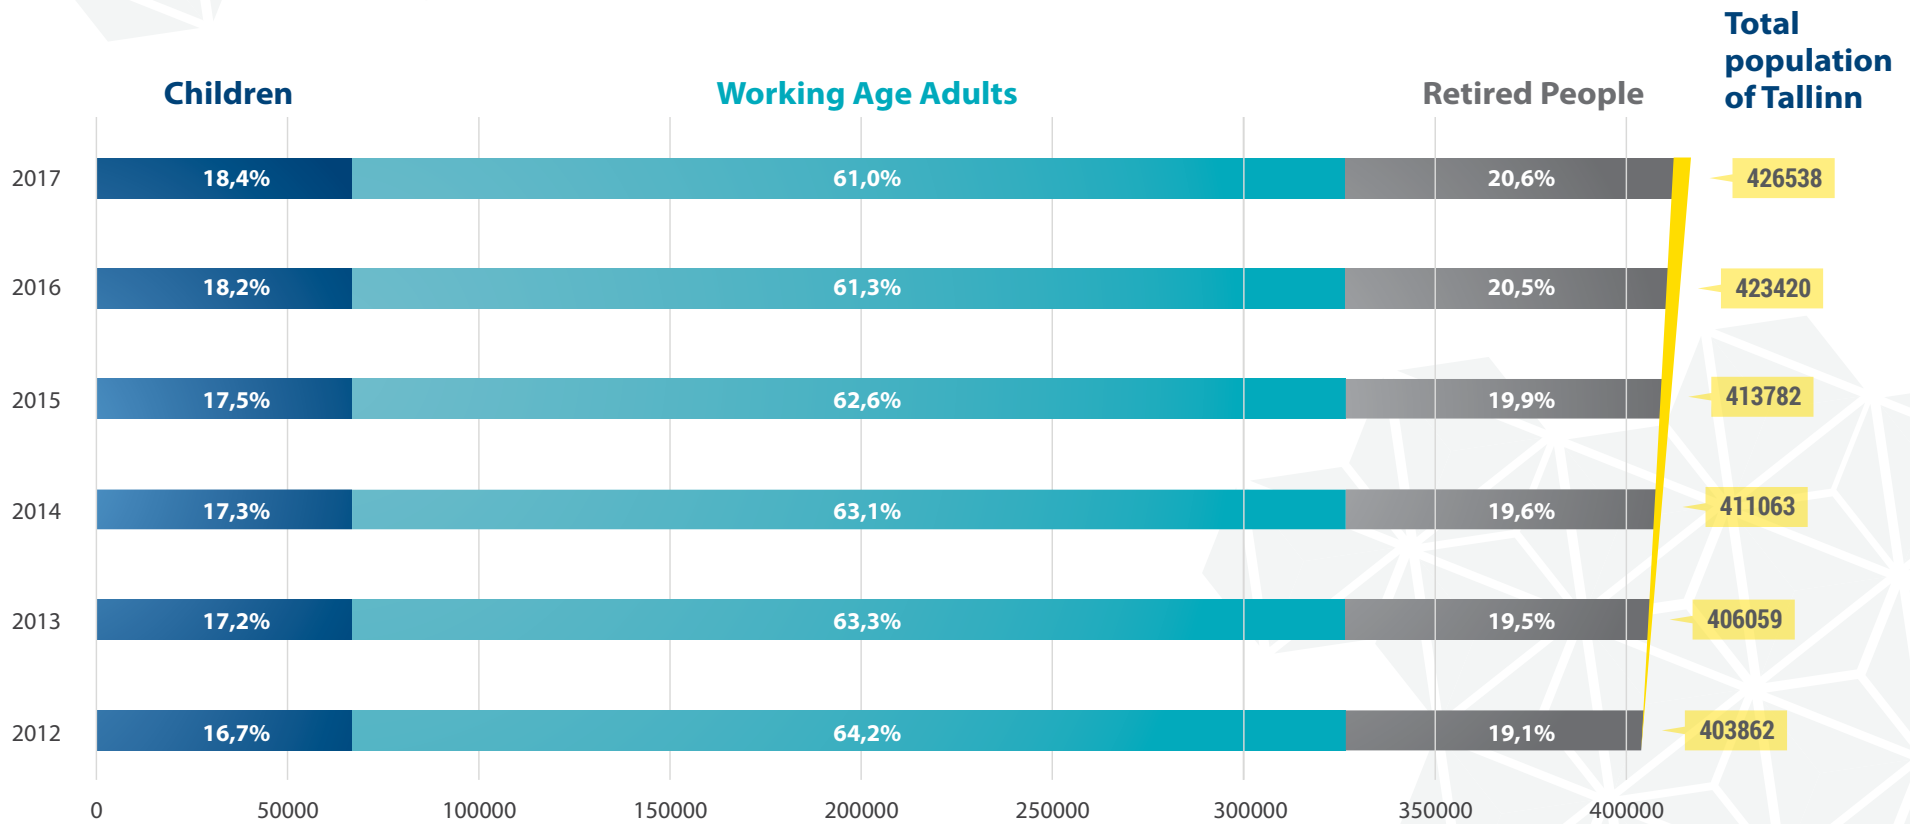

Expected attendance at the Multifunctional Building for Free Time and Leisure in Tallinn with a basic analysis of demographics and tourist traffic

CITIZENS OF TALLINN by age in the years 2012-2017

The demographics relating to age in Tallinn show that there is a strong need for an attraction that can operate during the day for young and retired people, while also functioning in the evening for those of working age.

In addition, as these children become adults, it will also be a valuable source of employment, providing several hundred new jobs for the inhabitants of Tallinn.

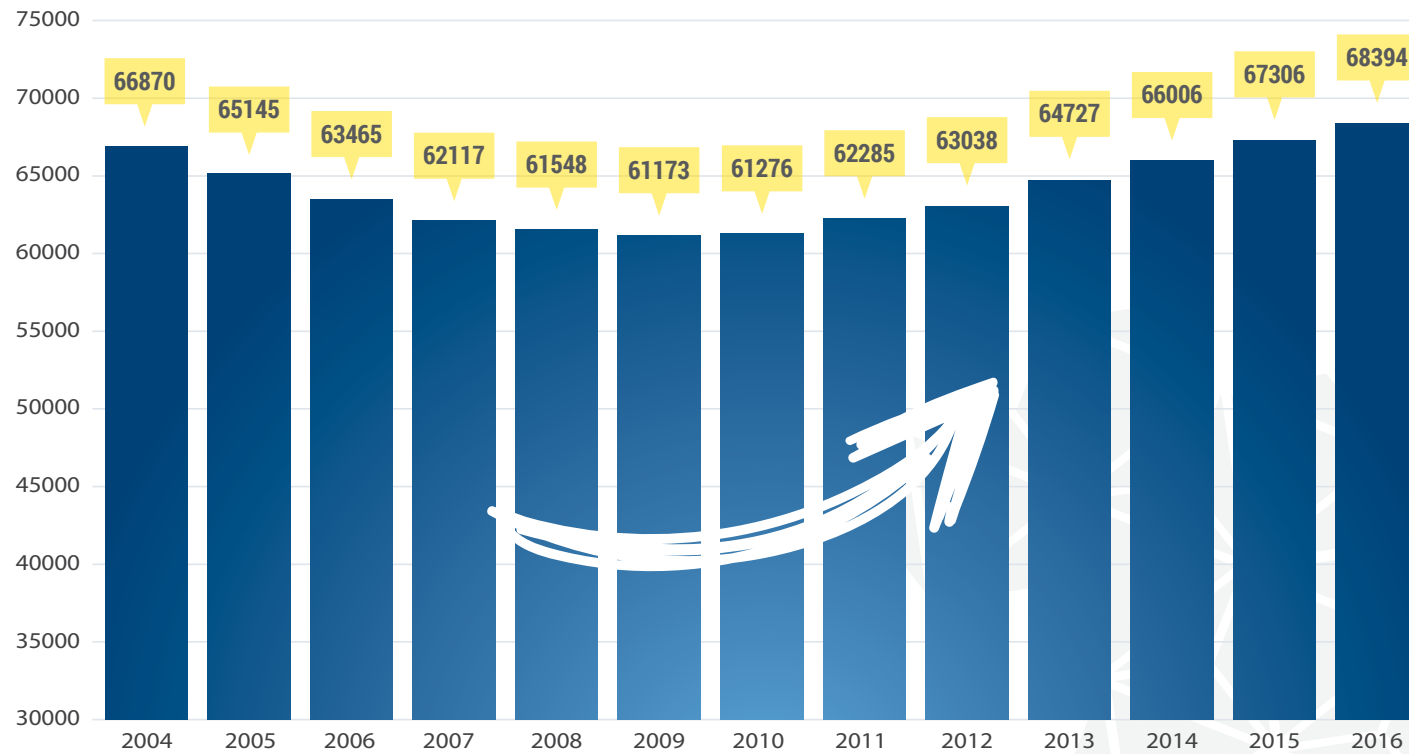

NUMBER OF CHILDREN IN EDUCATION IN TALLINN

The steadily increasing numbers of children require innovative and interactive forms of education. This can be provided by the various forms of educational content found within the Multifunctional Building for Free Time and Leisure.

 Total Numbers
of School Children
in Education

TRANSPORT POTENTIAL – Tallinn and Estonia

Tallinn's location on the coast of the Baltic Sea provides the city with an excellent range of transport opportunities. The city is not only an important sea and air hub, but it also forms the centre of a well-integrated rail and bus network. Many long-distance buses depart and arrive in Tallinn daily, while many

commuters make use of the extensive rail network to work in Tallinn while residing elsewhere. The future development of the Rail Baltica line will also increase the accessibility of Tallinn for tourists.

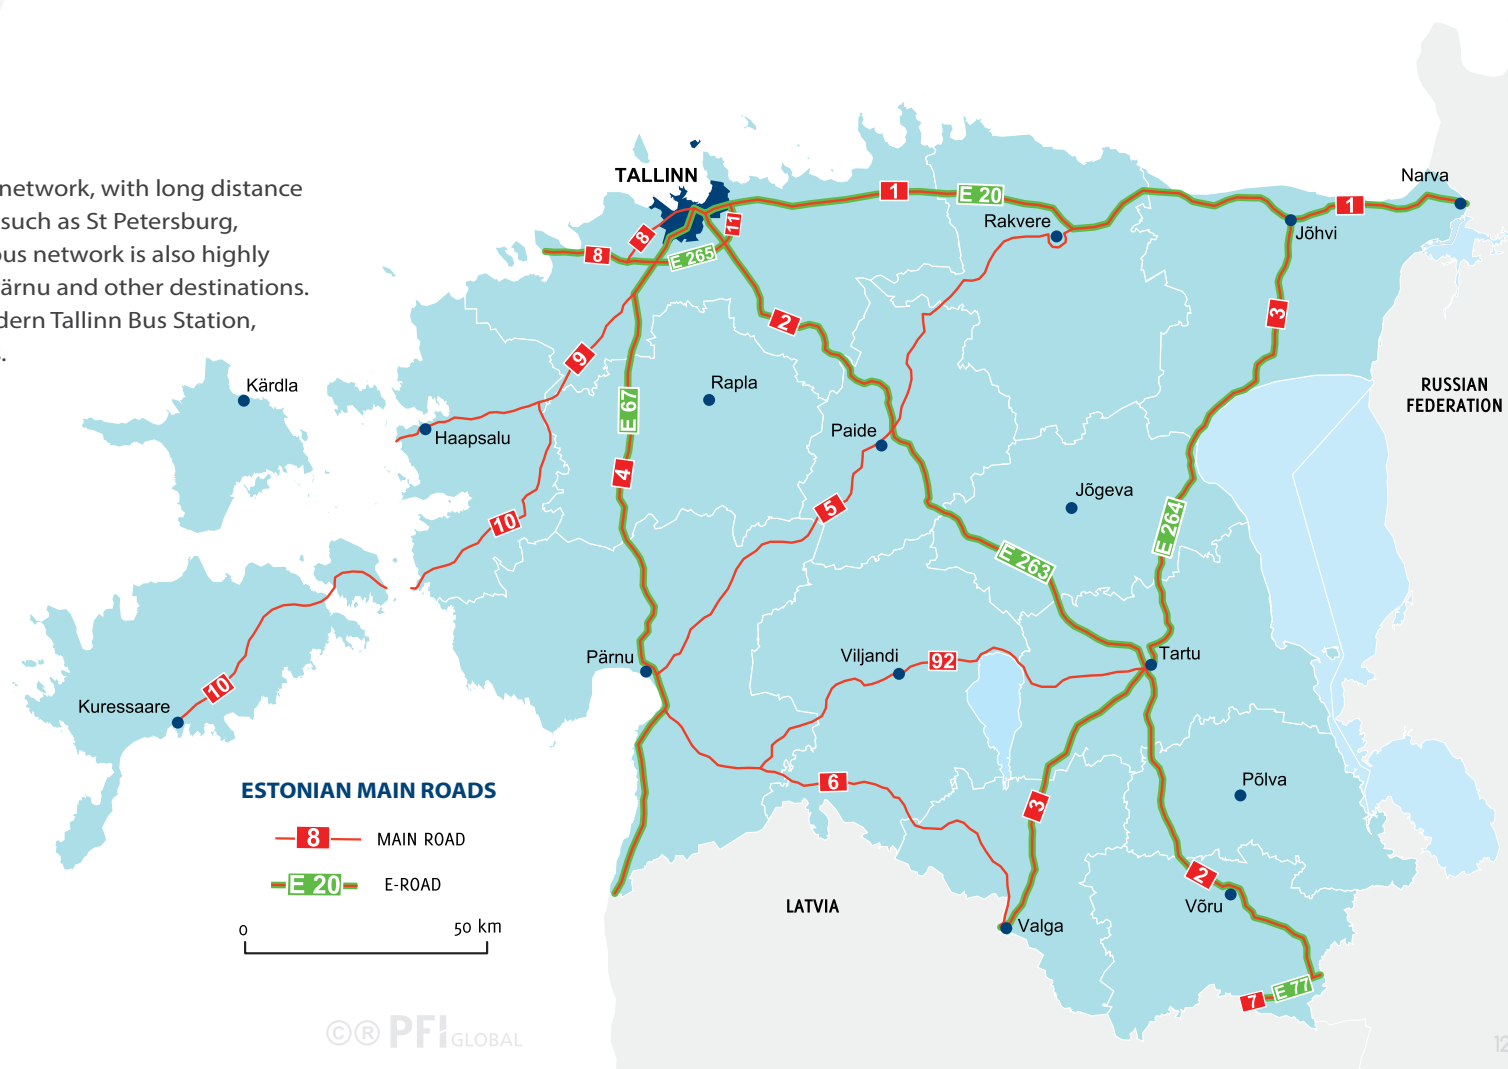

INTERCITY BUS TRANSPORT

Estonia has a very well developed bus transport network, with long distance international buses arriving in Tallinn from cities such as St Petersburg, Vilnius, Riga, Moscow and Minsk. The domestic bus network is also highly developed, with busy routes from Tartu, Narva, Pärnu and other destinations. All of these long distance buses arrive at the modern Tallinn Bus Station, which also acts as an interchange for passengers.

Tallinn-Riisipere
(Future Rail Baltica) Tallinn-Riga-Kaunas-Warsaw

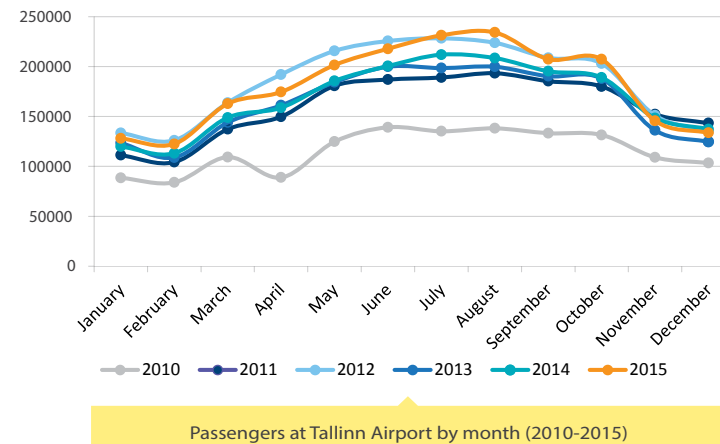

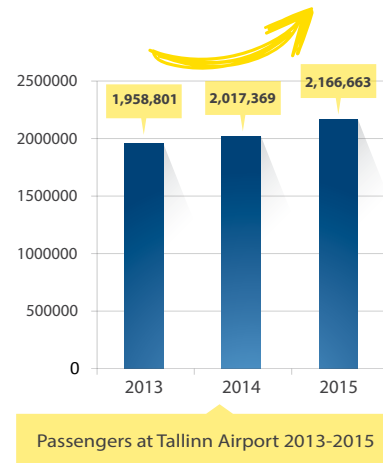

TRANSPORT POTENTIAL – Tallinn and Estonia

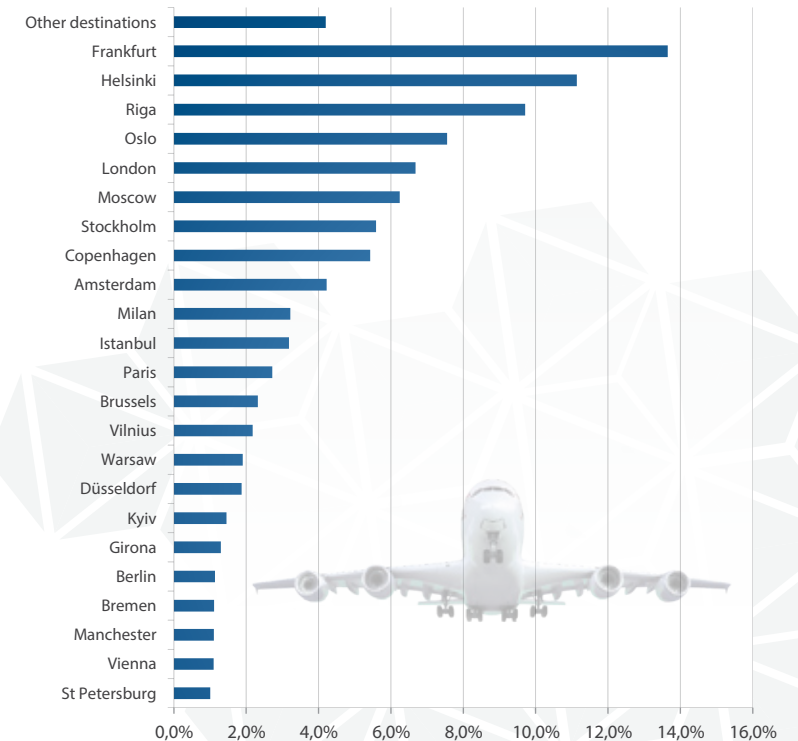

Tallinn Airport after the expansion in 2008 now serves over 2 million passengers per year. However, this traffic is highly dependent on the season, with passenger numbers decreasing dramatically between November and March.

The Multifunctional Building for Free Time and Leisure aims to reverse this trend by providing Tallinn with a world class tourist attraction, which will attract tourists from all over Europe and beyond, irrespective of the weather conditions. This in turn will translate to higher utilization of Tallinn Airport during the low season, and will lead to a more steady flow of tourists throughout the year.

LENNART MERI TALLINN AIRPORT

Share of flight passengers by route (2015)

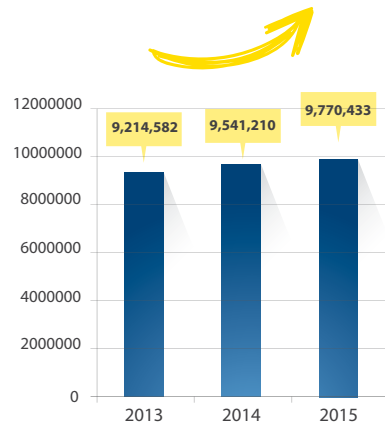

The Multifunctional Building for Free Time and Leisure can create new opportunities for passenger aviation, particularly during winter and weekends. This encourages the further development of the airport infrastructure, which provides significant benefits for both residents of Tallinn and tourists.

TRANSPORT POTENTIAL – Tallinn and Estonia

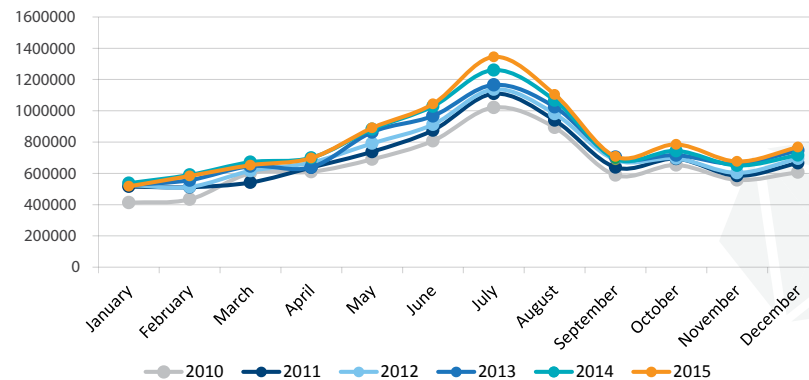

The importance of the Port of Tallinn to the success of the Multifunctional Building for Free Time and Leisure cannot be overstated. The port brings a significant amount of tourists into Tallinn from three main destinations, while the cruise ship terminal also brings in a large amount of tourists during the summer months.

However, like the airport, tourist traffic is highly seasonal. The Multifunctional Building for Free Time and Leisure aims to address this by promoting Tallinn as an all year tourist attraction, which in turn results in greater use of the port by passengers in the low season between September to May.

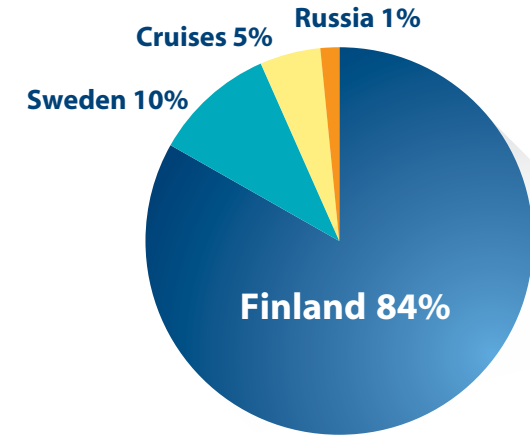

TALLINN OLD CITY HARBOUR

Passengers at Tallinn's Old City Harbour (2013-2015)

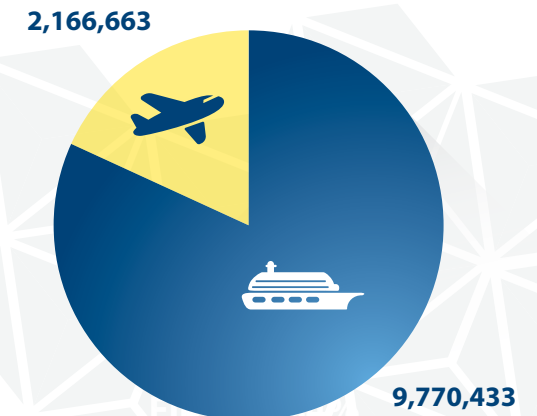

Passengers at Tallinn's Old City Harbour by month (2010-2015)

Finnish routes	8,213,809 passengers
Swedish routes	948,951 passengers
Russian routes	124,639 passengers
Cruise ships	504,245 passengers

Share of ship passengers by route (2015)

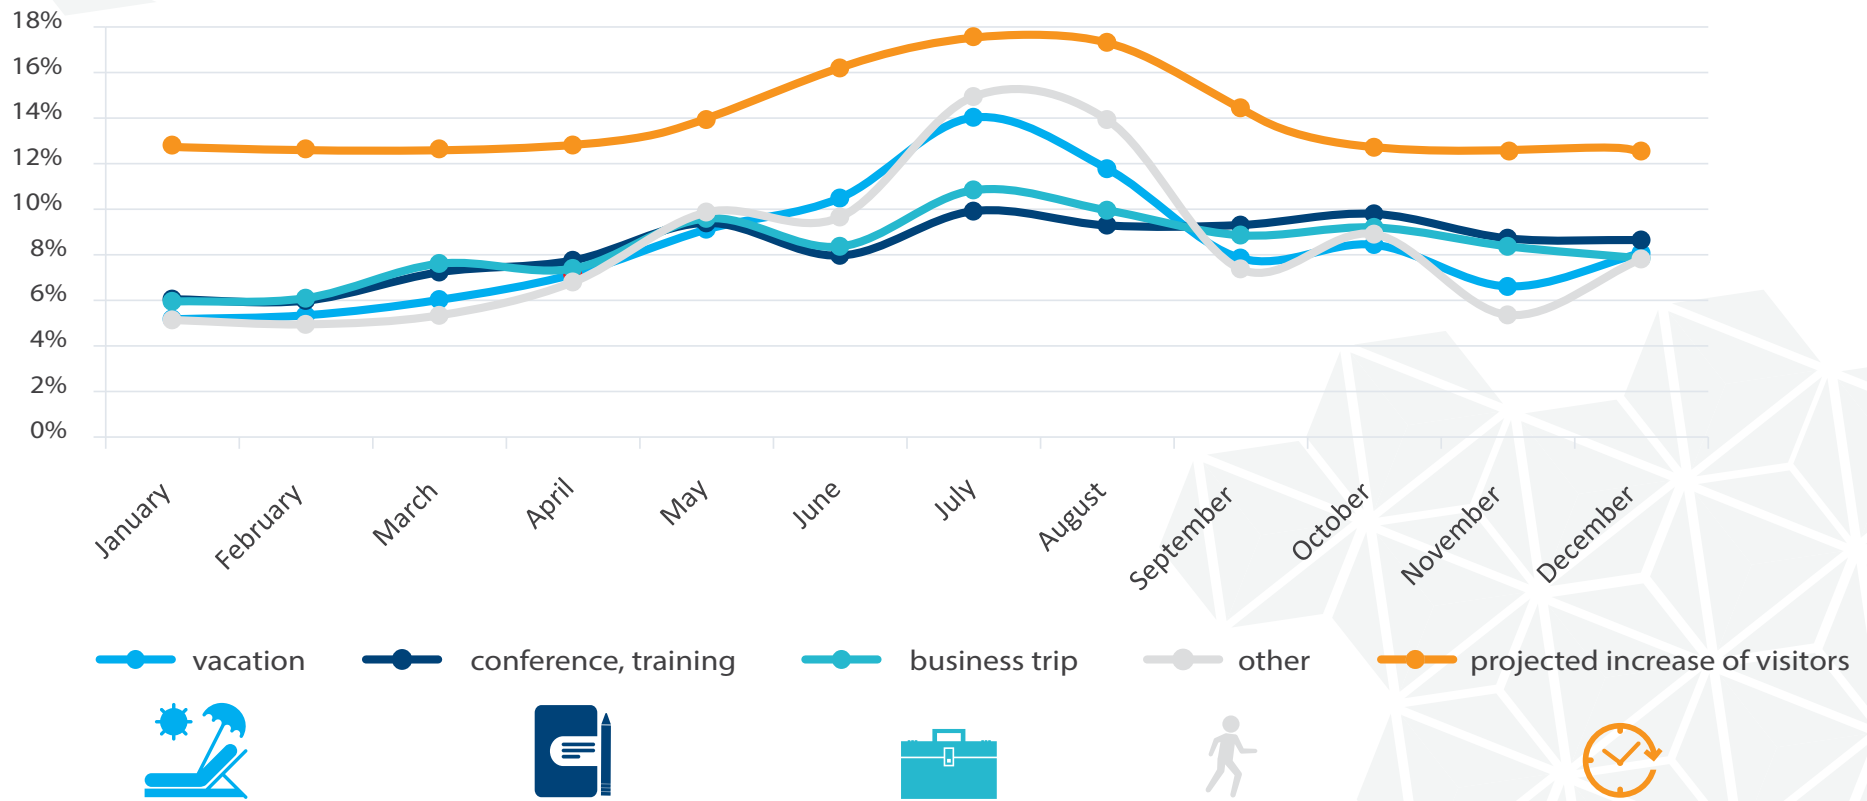

Share of ship and flight passengers in Tallinn (2015)

LENGTHENING THE TOURIST SEASON in Tallinn and Estonia

Lengthening the tourist season is a key component for the success of the Multifunctional Building for Free Time and Leisure. While visitor numbers are high during the key summer months, there is a significant drop in visitor numbers during the off season. To combat this, the Multifunctional Building for Free Time and Leisure will create an Integrated Tourist Information Center, which will exist to promote tourism to Tallinn

throughout the year. This will be able to respond quickly to the needs of the city, including encouraging tourists and other visitors to visit the city during the low season. In turn, this will decrease the differences between the high season and low season, resulting in significant benefits for Tallinn and the Estonian economy.

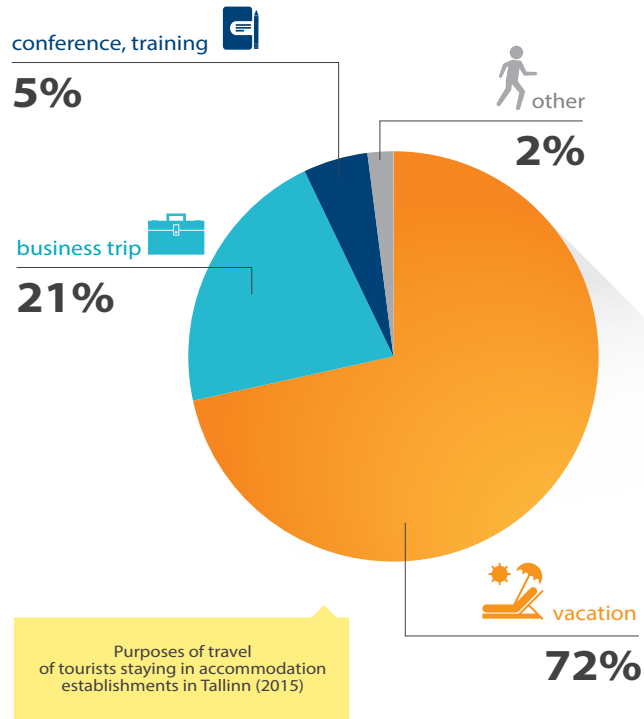

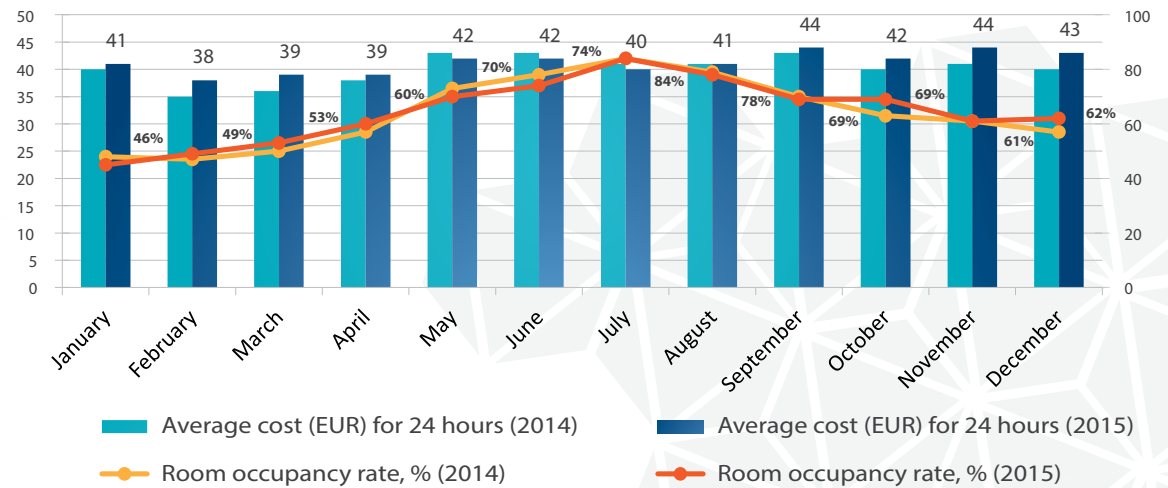

TOURIST MOVEMENTS In Tallinn 2014-2015

A careful analysis of tourism in Tallinn reveals that the seasonality of tourist flows in the city. The difference in hotel occupancy rates is as much as 38% between July and January, while occupancy rates above 70% are only achieved for four months during the year.

The Multifunctional Building for Free Time and Leisure aims to change this by encouraging visitors to visit during the low seasons, pushing up occupancy rates and promoting Tallinn as a year round tourist destination.

Room occupancy rate in Tallinn's accommodation establishments and the average cost for 24 hours (2014-2015)

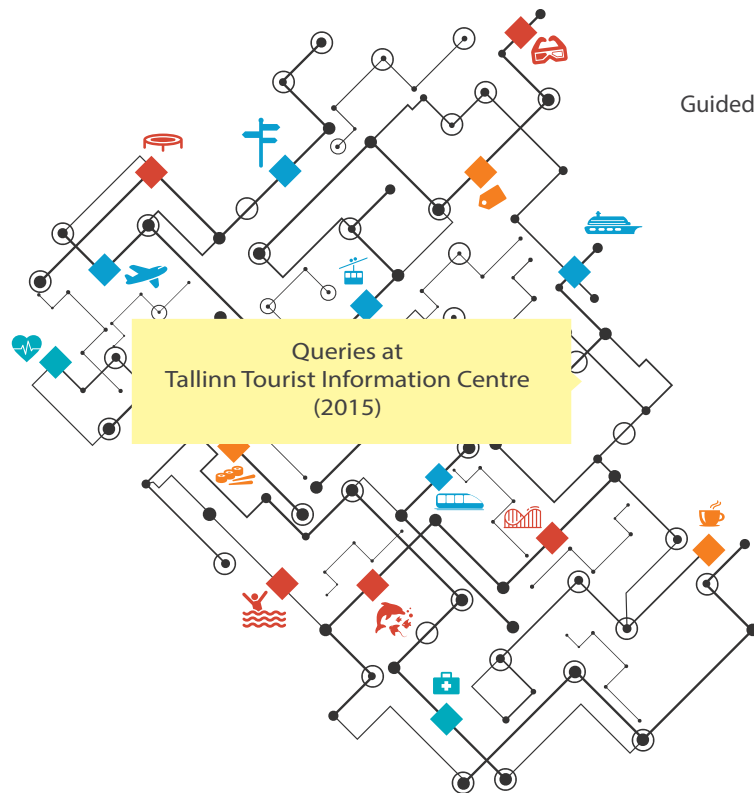

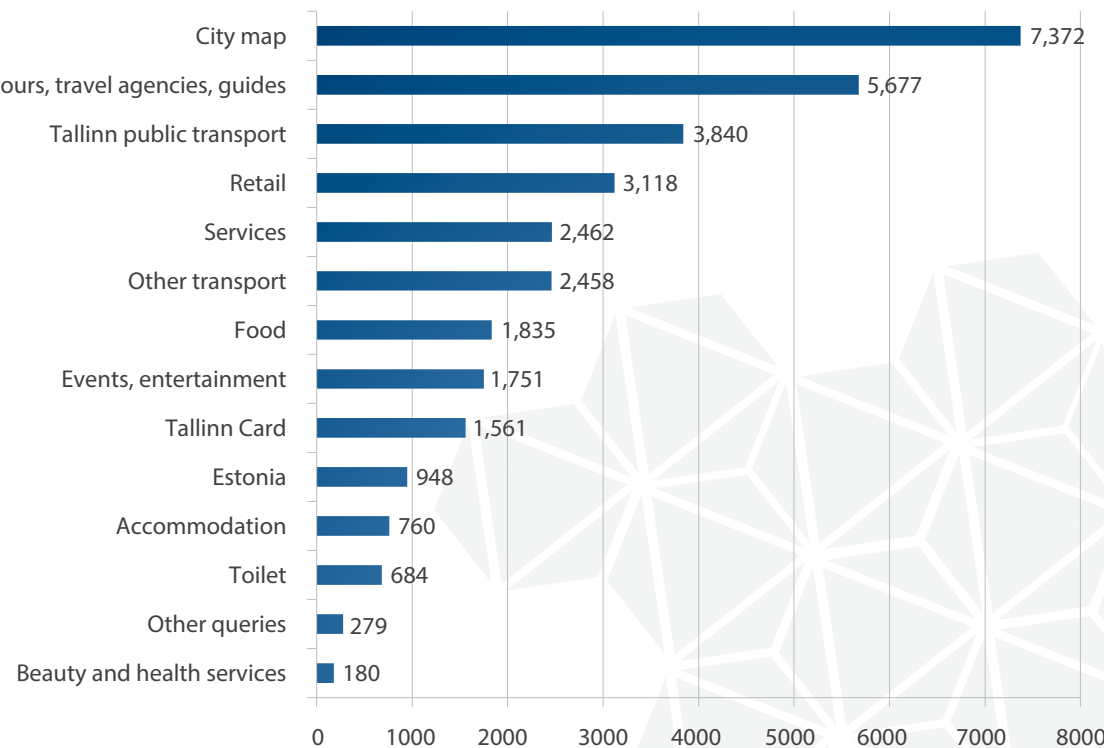

INTEGRATED TOURIST INFORMATION CENTER assisting tourists from the beginning to the end

The Integrated Tourist Information Center exists to provide the City of Tallinn and Estonia with a single, unified tourist information service. The system consists of several key components, including a fully functional online platform, interactive kiosks placed in key points such as Stockholm Airport and Helsinki Ferry Terminal,

and a physical tourist information centre located within the Multifunctional Building for Free Time and Leisure. The aim is to provide tourists with everything they need in one place, including public transport tickets and reservations for attractions, hotels and restaurants in the chosen language of the tourist.

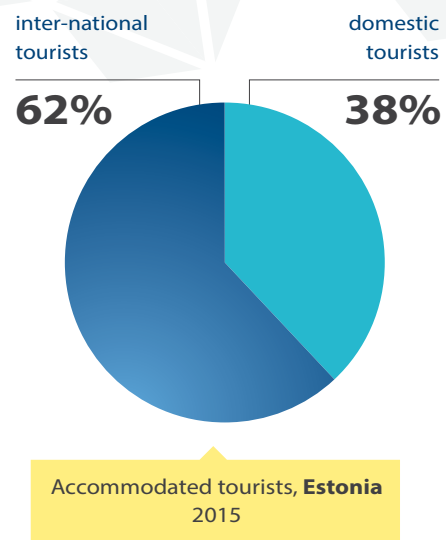

REASONS FOR VISITING TOURIST INFORMATION OFFICE IN TALLINN

OVERVIEW OF TOURISM in Tallinn and Estonia

A careful analysis of tourism in Tallinn reveals that the vast majority of tourists that stay overnight in Tallinn are international tourists. As a result, the Multifunctional Building for Free Time and Leisure aims to capture more domestic tourists into staying overnight

Compared to 2014, there was an increase in the number of domestic tourists and a decrease in the number of international tourists.

Total accommodated 1,579,491 -1%

Incl.:

international tourists 1,381,575 **-2%**
domestic tourists 197,916 **+4%**

The number of overnight stays of tourists accommodated in Tallinn decreased by 2% in 2015.

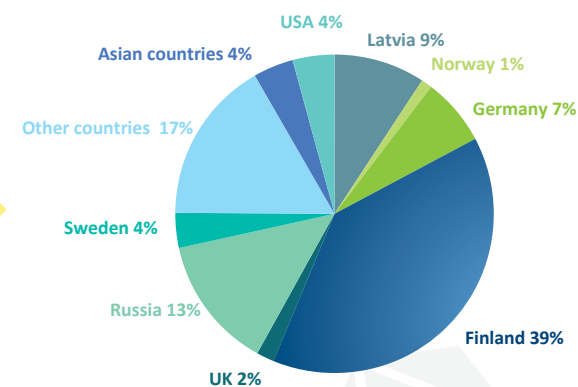

Overnight stays total: 2,790,993 -2%

Incl.:

international tourists 2,470,426 **-3%**
domestic tourists 320,567 **+1%**

in Tallinn, which will also encourage further expenditure in other tourist services in Tallinn.

Visits to Estonia
by foreign residents (2015)

Part III

PFI GLOBAL

**Functional Programme
Multifunctional Building
for Free Time and Leisure
and other attractions in Tallinn**

OCEANARIUM

Aquariums are attractions offering a
GUARANTEE OF COMMERCIAL SUCCESS

Functional assumptions:

- an extraordinary journey through the world of water, where coral reefs and a remarkable botanic collection can be seen;
- a destination where endangered animal species are presented in a unique way, while the visitor is immersed in the unique underwater environment;
- an educational adventure where themed exhibitions and multimedia presentations combine to provide a fully interactive experience;
- it will be a place that will attract visitors from Estonia, Finland, Sweden, Latvia, Russia and beyond!

It will be
a place where
guests return
time and time
again!!!

OCEANARIUM

Possible models for implementing the project
in Estonia

VARIANT A

total surface area: 22 000 - 30 000 m²
net cost ≈ 70 000 000 Euro
visitor numbers: minimum 1 950 000

VARIANT B

total surface area: 15 000 - 20 000 m²
net cost ≈ 50 000 000 Euro
visitor numbers: minimum 1 500 000

VARIANT C

total surface area: 12 000 - 15 000 m²
net cost ≈ 37 500 000 Euro
visitor numbers: minimum 1 000 000

GASTRONOMIC ZONE

The Gastronomic Zone is an integral part of the complex and provides a unique opportunity to try both Estonian and international cuisine, catering to the tastes of the visitors to the complex while also allowing them to explore the world through gastronomy.

Functional assumptions:

- fully accessible for visitors from all parts of the complex;
- a wide variety of culinary offerings;
- a modern self-service distribution system for meals;
- acts as a special culinary destination for tourists.

SHOPPING ZONE

The shopping zone will sell the best of Estonian products, allowing visitors the chance to sample and purchase the products that define Estonian tastes and culture. Tourists will be also able to purchase memorabilia and souvenirs that will remind them of their trip to the Oceanarium, while providing them with a further insight into the world of science, nature and ecology.

Functional assumptions:

- Estonian products will be highlighted;
- each outlet will cater for different groups, depending on their reason for visiting the complex;
- the shopping zone is easily accessible from all other zones within the complex in order to maximize revenues;
- the shopping zone will also be easily accessible for those visiting on cruise ships and scheduled Baltic Sea ferries.

MEDICAL CENTER

The unique medical center will be created to provide a central location for highly specialized medical practices. Visitors from throughout Estonia and beyond will visit the center for affordable, high quality care provided by highly qualified specialists utilizing modern medical equipment.

Functional assumptions:

- will provide high quality care for both Estonian and international patients;
- conveniently located for medical tourists;
- the hub of medical tourism in Tallinn;
- provides a world class medical facility in the heart of Tallinn;
- modern internet-based reservation system for appointments;
- access to well-equipped laboratories and equipment;
- a place for complex medical research.

HEALTHY AIR CENTRE WITH SALT CHAMBERS

A zone within the complex, equipped with modern graduation towers and salt chambers, located indoors and available throughout the year.

Functional assumptions:

- the zone will act as a modern spa within the center;
- features modern and beautiful architecture, which will be another unique and incredible attraction;
- the area is available for both tourists and visitors to the Active Relaxation Zone;
- the zone is made of advanced materials, using modern technologies and systems.

ACTIVE RELAXATION ZONE

This zone contains a variety of attractions, all of which are suitable for spending time with friends and family. Within the zone, visitors can find swimming pools, beaches and squash courts, suitable for all ages. The Active Relaxation Zone is designed to be suitable for the Estonian climate, with a retractable roof providing an additional attraction during the summer months.

Functional assumptions:

- contains swimming pools, beaches and squash courts;
- additional food and drink service points;
- unique opening roof, allowing the possibility of transforming the venue during warm summers;
- provides an additional all-year, weather-independent attraction
- events held all year round, including large international beach parties – even in winter;
- provides an additional year-round tourist attraction;
- will attract large organised groups from neighbouring countries.

TROPICAL LAGOON

Possible models for implementing the project in Estonia

VARIANT A

Tropical Lagoon: 6 000 m²
Saunarium: 1 800 m²
Fitness: 700 m²
total surface area: 8 500 m²
net cost ≈ 21,000,000 Euro

VARIANT B

Tropical Lagoon: 5 000 m²
Saunarium: 1 500 m²
Fitness: 500 m²
total surface area: 7 000 m²
net cost ≈ 17,625,000 Euro

VARIANT C

Tropical Lagoon: 4 000 m²
Saunarium: 1 000 m²
Fitness: 500 m²
total surface area: 5 500 m²
net cost ≈ 13,750,000 Euro

HOTEL SECRET CONTINENTAL with an art gallery, bowling alley and auction house

Hotels must be a special place, otherwise visitors will not return for repeat visits. At the Secret Continental Hotel, guests will be provided with many exciting experiences during their stay. Special thematically designed interiors will be dedicated to the continents, countries and cities of the world, which will give birth to an extraordinary journey to distant corners of the whole world. Undoubtedly, this will be a truly special attraction throughout the city and the region.

Functional assumptions:

- Themed floors and rooms;
- Enriched with a conference area, a modern art gallery, bowling alley, whiskey / cigar shop and a special viewing terrace;
- Equipped with a restaurant serving specially themed cuisine from various parts of the world;
- The hotel also provides services for medical tourism.

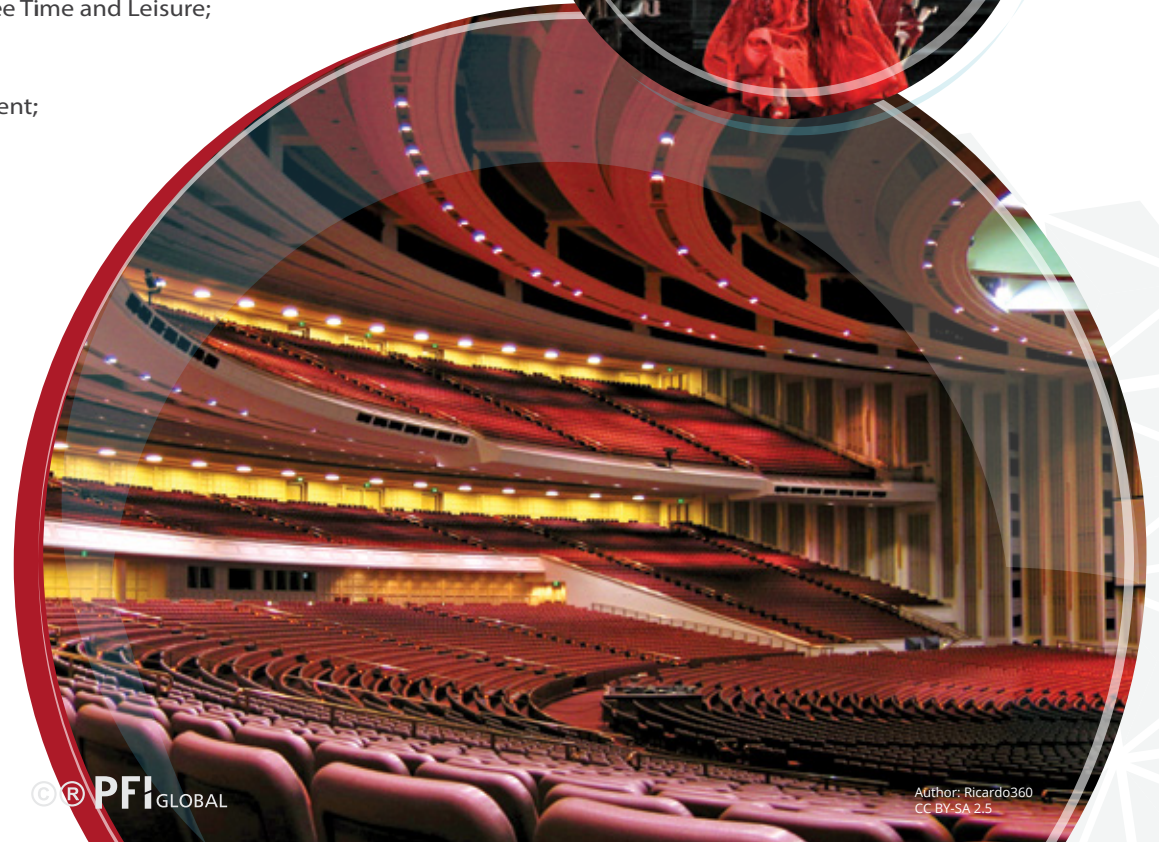

LINNAHALL CONFERENCE ZONE

Along with the construction of the Multifunctional Building for Free Time and Leisure, we propose the complete renovation of the Linnahall as part of the overall project, including a luxury hotel for visitors.

Functional assumptions:

- the Linnahall can be directly connected to the Multifunctional Building for Free Time and Leisure;
- can attract world class conferences, exhibitions and concerts;
- will be reconstructed using advanced technologies and renewable materials;
- the possibility of providing hotel accommodation, either in Linnahall or adjacent;
- it will be a tourist attraction in its own right.

TALLINN SKY JUMP

As part of a modern iconic attraction, we propose the construction of a modern Drop Tower. This combines the function of an observation tower with a modern attraction for thrill seekers. Guests are first taken to over 100 m in the sky, before falling to earth at speeds of in excess of 100km/h. This ride provides an authentic replication of the sensations felt when sky diving, allowing guests the unique possibility to see Tallinn from a whole new perspective.

Functional assumptions:

- the ride will attract thrillseekers to Tallinn;
- it provides a real attraction for those in the 14-30 age bracket;
- capacity for 900 riders per hour;
- the tower rotates through 360 degrees before falling, allowing visitors to see and experience a unique panoramic view of the Old Town and beyond.

Author: Paultons Park
cc-by-2.0

PENGUIN ISLAND

The Penguin Island is designed to highlight the danger to the habitat of these beautiful animals. While visitors will be able to witness the lives of penguins in a remarkable enclosure that includes a 4 meter deep pool and the possibility of observing the penguins from above, next to and below, visitors will also learn about the problems caused by climate change. Visitors will also be able to interact with the penguins on special tours, which can include opportunities to act as a "keeper for the day".

Functional assumptions:

- the enclosure provides a unique view into the world of penguins
- accessible all year round
- not only entertains, but educates
- focuses on climate change issues affecting penguins and other animals that live in cold climates

REVOLVING RESTAURANT and Viewing Tower

This place will attract visitors with not only great cuisine, but also the unique climate. In the observation tower, a rotating restaurant will provide a world class dining experience, with a spectacular panorama view of the surrounding city. The slowly rotating room, assisted by a special rotary mechanism and glazed walls will provide a truly remarkable sightseeing experience. Guests will be left with powerful memories, not only of taste, but also of aesthetics.

Functional assumptions:

- provides unique and constantly changing panoramic views during meals, provided through the rotary mechanism and glass walls;
- the opportunity to taste world class cuisine;
- rigorous safety standards will be applied during the stages of production, assembly and operation.

CABLE CAR

Popular attractions of the city require convenient connections with other attractions within the city, and this can be achieved by the help of various types of public transport. However, the best form is transport, when the means of transport is itself a further attraction in the city. Visitors to Tallinn will be able to quickly transition between the Old City Harbour and the Old Town, while also benefitting from the possibility of viewing an incredible panorama of the harbour and the Old Town during their journey.

Functional assumptions:

- the cable car acts as a form of transport with the other attractions in the city or act as a park and ride facility;
- use of modern cabins provide a high quality visual experience;
- very stringent standards of safety will be applied during construction, installation, and subsequent operations.

SMART CENTER
What exactly is it?

ITI – INTEGRATED TERRITORIAL INVESTMENTS

Functional Area of Tallinn

The Transport Interchange is a junction, which aims to improve the attractiveness of public transport, combined with large Park & Ride / Bike & Ride facilities. Intelligent traffic management systems and many other innovative solutions will encourage the use of low carbon transport and will help to change driving habits while reducing the intensity of car traffic in the city.

Car Parks

+

Bicycles

+

Public Transport

Transport Interchange

Car Parks

+

Bicycles

+

Electric Car Hire

+

Electric Public Transport

+

Central Hub

PHILOSOPHY FOR A GREEN TALLINN

Functional assumptions

Creating a transport interchange is not a difficult task. The problem arises when we want to ensure the correct operation of the facility for the needs of the users. Parking in a remote area does not built trust, as drivers are afraid to leave their cars in such an area. For this reason, appropriate elements should be constructed so that the transport interchange can fulfil the needs of users and create an incentive for drivers to switch to alternative means of transport*. **The Transport Interchange and Central Hub meets their needs and more.**

The diversity of functions within the facility, all of which complement each other, will help to make the Central Hub a source of activity throughout the day and night. Visitors will be able to enjoy many discounts and promotions, such as free public transport tickets for anyone leaving their car in the parking facility while making a journey to the city center. This and many other facilities will contribute to the creation of the **Modern Transport Interchange and Central Hub.**

* Cars can be left at dedicated car parks provided at the Transport Interchange

Electric public transport

In addition to trams which are already powered by electricity we would like to create an entire fleet of green, environmentally-friendly buses. They will contribute to significantly reducing the amount of polluting cars with internal combustion engines in the city and produce zero emissions.

Electric car hire

To make traveling in Tallinn even more ecological, we offer the opportunity to leave cars at the Transport Interchange in order to take advantage of a car powered solely by electricity. It gives us a whole range of new possibilities, ranging from free parking and access to bus lanes, through to accessing areas that are inaccessible by car with an ordinary internal combustion engine.

Charging points

This is the last element in linking together the entire idea of eco-transport. These points will provide power created by renewable power sources.

Local Materials

For the construction of the Transport Interchange and Central Hub, we use materials from local sources, thus limiting the amount of emissions produced during the transportation of construction materials.

Recycling

We place great importance on the type of materials used. Certified steel and wood is used for the vast majority of the construction, while the use of concrete is kept to a minimum. This allows the construction material to be reused in the future.

Passive building design

We use the principles of passive design, which means that the buildings are designed to be as energy efficient as possible, which in turn reduces the overall impact on the environment.

Green Times Two

We are driven by the core philosophy of **“we return what we have taken from the Earth”**. This means that we cover roofs, balconies and other architectural features with grass, plants and other green elements.

PHILOSOPHY FOR A GREEN TALLINN

Functional assumptions

Green Tallinn, which addresses concerns about the purity of air, which residents must breathe every day. In the present day of development, an ever-growing issue is the fight by cities and agglomerations against smog. The trouble of smog can effect residents, with serious health complications occurring as a result of frequent exposure to pollution. Examining the air quality and ineffective social campaigns are not enough to win the battle against pollution, which is why PFI Global has developed the comprehensive system **Tallinn Air-Watch**, which is based on three key principles:

- Identifying the cause of smog
- Finding solutions
- Implementing complex solutions

Cause of pollution:

From the many available studies on the subject, we know that the main causes and origin of smog includes:

Furnaces – 83%

Industry – 8%

Cars – 7%

Other – 2%

Implementation of complex solutions

It has been shown that effective monitoring, prevention and quick reaction to problems are demonstrated to reduce inappropriate use of furnaces by more than 20%. To achieve this goal, we offer:

Mobile application

The "smog sources" (chimney, fireplaces, open fires etc.) readings are taken from the application and are sent automatically to an operator station, allowing immediate intervention from anti-smog enforcement officers

Mobile measurement stations monitoring air quality

Equipped with specialist equipment, measuring:

- PM10
- PM 2.5
- Benzo(a)pyrene

UAV's (unmanned aerial vehicle)

equipped with a video recording system and a compact air quality monitoring system for patrolling and measuring the gases emitted from chimneys

Additional support for this system is based on a broad campaign of support for the P&R (Park and Ride) system based on the previously described solutions, i.e. electric powered public transport vehicles, electric car hire, bicycle rental and more, which utilizes the provided infrastructure at the Transport Interchange.

Tallinn Air-Watch

- A comprehensive system for monitoring and controlling air quality in Tallinn

PHILOSOPHY FOR A GREEN TALLINN

Functional assumptions

New
philosophy
of managing
tourist flows

Interactive Tourist Information Center

The Interactive Tourism Information Center (ITIC) aims to create a coherent and modern process for managing tourist information in the city. This platform will allow visitors to make reservations and payments while being able to bypass queues, ordering guides and vehicles as well as providing the possibility of quick car rental. It is also closely integrated with electric car and bicycle rental services, which should be part of the technological infrastructure.

Main tasks of the ITIC:

- attract a new flow of tourists;
- effective management of the tourist stream;
- lengthen the average stay in the city;
- build positive emotions in visitors to the city.

Functional assumptions:

- the ITIC center will be friendly for tourists, operating as a linked information point;
- the center will provide a wide range of interactive tools in order to facilitate the planning of trips to the city, including the possibility of booking accommodation, transfers, purchasing tickets to tourist attractions and reserving city tours, which in turn helps to establish tourist routes;
- with the help of a friendly online platform, fully accessible through multilingual mobile applications, visitors can receive complete information on the multifunctional building and its additional attractions, but can also receive suggestions for visits to other tourist attractions and the historical centre of the city;
- the application can also provide complete navigation services on demand, including the possibility of purchasing tickets for public transport as well as providing real time public transport data.

New
Icon

The object will quickly become the new icon of modern Tallinn, **This will have a big impact on raising the value of marketing for the city and Estonia.** This will translate into a new perception of the city by potential investors who will want to invest in Estonia and will create new jobs alongside increasing tax revenue.

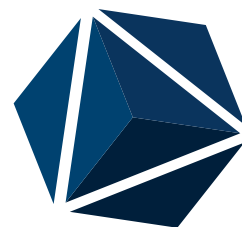

Economic
motor

This modern facility, as the **flywheel of the local economy**, will ensure the development of the tourism, hotel, catering and transport industries. In addition, the investment will allow us to create many new jobs, both in terms of project implementation and future operations and in the broader field of developing tourism. increasing tax revenue.

Part IV

PFI GLOBAL
